OPEN CATALOG INTERFACE

Your direct access to our online catalog

In times of digitalization, simple processes are becoming more and more important. With the help of our OCI interface, the Murrelektronik product catalog is easily integrated into your processes and you can take advantage of the many benefits of our online shop with just a few clicks from your eProcurement or ERP system.

What is the OCI interface?

Originally developed by SAP, the OCI interface is a standard for exchanging catalog data between supported ERP systems and the Murrelektronik online shop. It can be integrated into your existing ERP system with a minimum of time and can be used immediately.
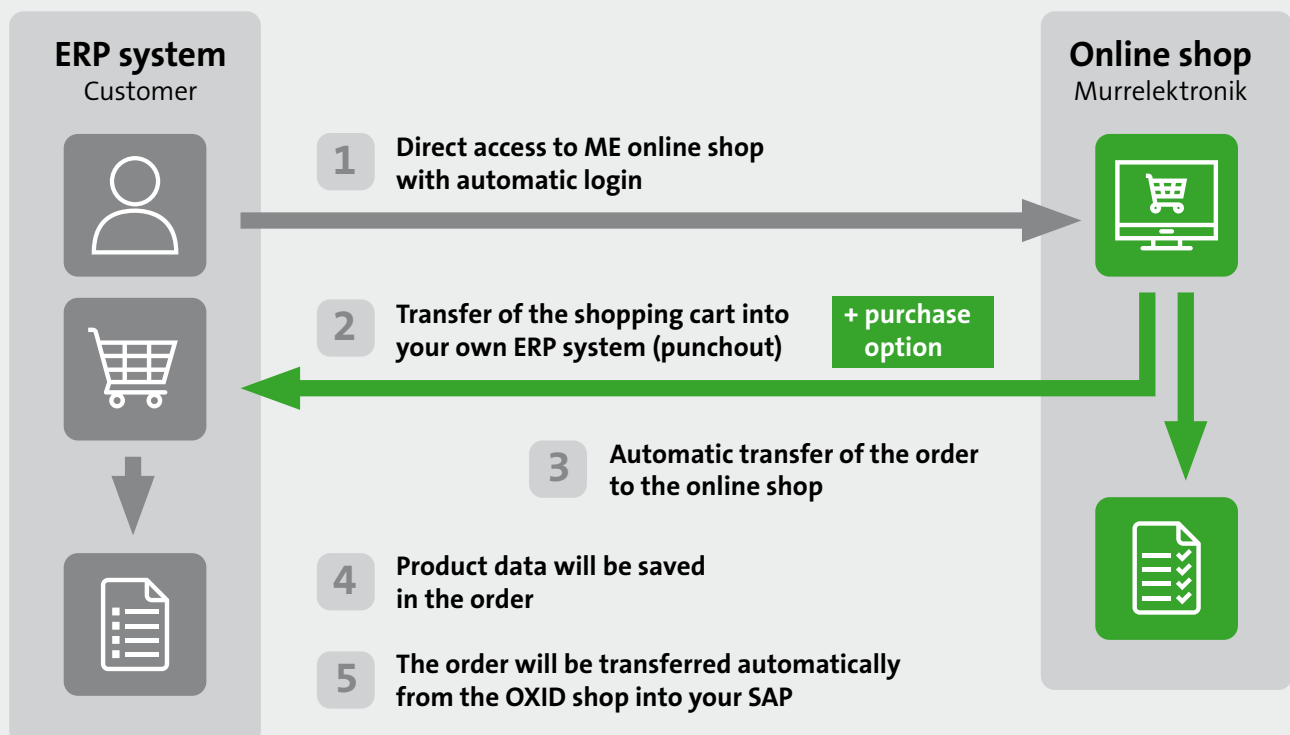

How does it work?

You continue to work in your familiar working environment in your ERP system and create a purchase order or purchase request. Then you have the possibility to open the Murrelektronik online shop directly from your system. A customer account is mandatory for direct access. For an optimal use, parameters have to be exchanged in advance, which you have to enter in your ERP system. From that moment on, all functions like the product search, individual conditions or article data are available. Once you are logged in, a click will automatically take you to your account in the ME online shop.

Then you can select all items you need and put them in the shopping cart. At the end of your order process, the shopping cart can be easily and automatically transferred to your own ERP system by one click. You are now working in your ERP system again and can finish the pre-filled order. This allows the order process to be optimally integrated into your own workflows and approval processes.

The order can then be sent in the traditional way, ideally via EDI.

Optionally, you can place your order directly in the ME online shop. With this additional function your order details are transferred to the ME online shop directly and your order is processed immediately.

ERP system
Customer

Online shop
Murrelektronik

1 **Direct access to ME online shop with automatic login**

2 **Transfer of the shopping cart into your own ERP system (punchout)** + purchase option

3 **Automatic transfer of the order to the online shop**

4 **Product data will be saved in the order**

5 **The order will be transferred automatically from the OXID shop into your SAP**

Your advantages
